

DATAFAZE

The overall goal of the **MDCS Solution** is to read the meter data and get it to the utility company quickly, accurately and at the lowest cost possible. For those customers who do not have ready capability to capture or reformat the meter data for their own internal use, **MDCS** will provide that service for you through **DATAFAZE**.

DATAFAZE is a version of MDMS that can take the data from the meter, deliver it to a secure server, configure the data in a manner directed by the utility and deliver it anywhere the utility wants. We can provide secure storage options for the data through our partner network with Oracle and work with your administrative team on how best to deliver the meter data so that it is most useful to your organization.

MDCS provides our loyal customers three tools for efficiency and growth:

A POWERFUL RELATIONAL DATABASE SOFTWARE

for greater visibility into your administrative processes to help streamline operations, improve efficiencies, manage complexity and grow your business

COST EFFECTIVE CUSTOMIZABLE SOFTWARE SOLUTIONS

that enable our utility customer to better serve their customers. Expertise in both software design and an understanding of the administrative challenges you face every day.

COMPREHENSIVE SUPPORT SERVICES

are all about getting fast answers from knowledgeable people ~ to resolve your issues in a timely manner. These also include secure cloud storage through our Oracle partner.

Here's how it works:

1. GATHER REQUIREMENTS

A written document of specifications that includes detailed requirements provided by you.

2. ANALYSIS

A review of the data requirements and structuring
of functional system specs.

3. DESIGN

Database design starts
with a conceptual model for forms, displays, transactions,
data integrity and security.

4. IMPLEMENTATION

Re-programming of existing databases,
correlating data to customers needs and feedback, testing, training, and installation
of operational software programs.

5. MAINTENANCE

Monitor, repair, enhance cloud storage
and system support.
